

The West Central Conservancy District constantly evaluates operations to keep monthly rates the same by maintaining operating costs. One area of assistance is by having homeowners check their outdoor cleanout for missing or damaged caps. Your cleanout is usually a white pipe sticking out of the ground within 3 feet of the front or sides of your home. Please report any missing or damaged cleanout caps to the District; by calling 317-272-2980 opt 2. The District can replace or repair these caps and reduce the amount of flow received at our Plant for treatment.

Additionally, please note that it is **ILLEGAL** to have downspouts and sump pumps connected to the Sanitary Sewer System. Furthermore, in heavy rain events it is **ILLEGAL** to open manhole covers to drain surface water. If you are aware of any such connections or activity, please contact the West Central Conservancy District to report such instances.

Thank you for your assistance in this matter.
